

### Pooya Hemami

Pooya joined Edison's healthcare team in November 2012 and took on additional duties as a supervisory analyst in early 2019. He is a licensed optometrist with several years of clinical practice and regulatory experience. Prior to joining Edison, he covered the Canadian healthcare sector as a research analyst at Desjardins Capital Markets. Pooya holds a Doctor of Optometry degree from the University of Montreal, and an MBA (finance concentration) from McGill University. He received his CFA charter in 2011.

### **Dr Jonas Peciulis**

Jonas joined Edison in November 2015. He is a qualified medical doctor with several years of clinical practice. He then moved into equity research as a healthcare analyst at Norne Securities, focused on Norwegian companies, and received two StarMine awards for stock picking in 2013. Most recently, he worked for a London-based life sciences venture capital company before completing his MBA degree.

### Sean Conroy

Sean joined Edison's healthcare team in October 2020. He previously worked on the sell-side covering European large-cap pharmaceuticals and biotech stocks at Jefferies. Prior to moving into equity research, Sean worked at Charles River Laboratories performing drug discovery services. He holds a PhD in medicinal chemistry from the University of Nottingham.

### Jyoti Prakash

Jyoti joined Edison's healthcare team in December 2020. She has over 12 years' experience in equities including more than seven years as a sell-side analyst covering European healthcare stocks. Prior to joining Edison, Jyoti covered the European mid-cap healthcare sector for AlphaValue, a France-based independent equity research provider. She holds an MBA (finance concentration) and is a CFA charter holder.

### **Jacob Thrane**

Jacob joined the Edison healthcare team in November 2021. He has held roles in product management and corporate development in the healthcare industry and brings several years of equity analysis experience from Standard & Poor's (London) and Baader Bank (Munich) covering pharmaceutical, biotech and medtech stocks. Jacob holds an MSc in biochemistry from the University of Copenhagen and received his executive MBA from Cass Business School in London.

# **Harry Shrives**

Harry joined Edison's healthcare team in November 2021. Before this, he worked as a medicinal chemist at GSK, gaining experience in a range of areas including small molecule drug discovery, biopharmaceutical research and reaction automation. Harry holds a PhD in organic chemistry from the University of Manchester.

### Kenneth Mestemacher

Ken is a director of TMT research and has 20+ years of experience in finance and engineering. Prior to joining Edison in 2021, he spent five years in equity research in TMT and other sectors. He has an MBA with High Honors from the University of Chicago Booth School of Business and a degree in chemical engineering from Missouri University.

# Karl Egeland

Karl Egeland has a research and analysis background in various sectors including biotechnology and semiconductor technology. He has contributed to several financial outlets on topics including immuno-oncology, infectious diseases/vaccines, inflammatory-fibrotic diseases, cell therapy, critical care, hyperinflammation and Alzheimer's disease. Karl has a BSc in mechanical engineering from Grove City College and an executive MBA from the Jack Welch Management Institute in Washington, DC.

# Nidhi Singh

Nidhi joined Edison's healthcare team in January 2022. She has provided fully fledged support to sell-side equity research firms for over eight years, across multiple sectors. Nidhi has a postgraduate degree in management (majoring in finance) and a graduate degree in commerce.

Prices at 11 April 2022

Published 14 April 2022

Welcome to the April edition of the Edison Healthcare Insight. In this edition we have profiled 36 of our healthcare companies under coverage.

Readers wishing more detail should visit our website, where reports are freely available for download (<a href="www.edisongroup.com">www.edisongroup.com</a>). All profit and earnings figures shown are normalised, excluding amortisation of acquired intangibles, exceptional items and share-based payments.

Edison is an investment research and advisory company, with offices in North America, Europe, the Middle East and AsiaPac. The heart of Edison is our world renowned equity research platform and deep multisector expertise. At Edison Investment Research, our research is widely read by international investors, advisors and stakeholders. Edison Advisors leverages our core research platform to provide differentiated services including investor relations and strategic consulting.

We welcome any comments/suggestions our readers may have.

**Neil Shah** 

**Director of research**

# Abliva (ABLI)

### **INVESTMENT SUMMARY**

Abliva is focused on primary mitochondrial diseases (PMD). The core portfolio consists of KL1333 and NV354. KL1333 is a small molecule NAD+ modulator used to restore intracellular energy balance. With the investigational new drug (IND) application approved by the FDA, Abliva is getting ready for the pivotal Phase II/III FALCON trial with KL1333. The FALCON study will enrol up to 180 PMD patients, who will be randomised to receive treatment with KL1333 or placebo twice daily for 12 months. Positive Phase Ia/b data with KL1333 with first findings from treating patients were published in 2021. Abliva is also progressing with its other core asset NV354 as a systemic treatment for Leigh syndrome and plans to initiate a Phase I trial in 2022.

### **INDUSTRY OUTLOOK**

Abliva has a diversified portfolio, with all assets aimed at improving mitochondrial metabolism and function. We believe this puts Abliva among the very few experts in mitochondrial medicine.

# Analyst

Dr Jonas Peciulis

# **Actinogen Medical (ACW)**

# INVESTMENT SUMMARY

Actinogen has been expanding its R&D programme lately with the lead asset Xanamem, 11beta-HSD1 inhibitor, now targeting three different CNS indications. The XanaMIA study (n=107) investigates Xanamem in mild cognitive impairment (MCI) due to Alzheimer's disease (AD). It has two parts: Part A – dose ranging (enrolment complete; results are expected in April 2022) and Part B – efficacy of Xanamem in patients with MCI due to AD. The second Phase II trial is in Fragile X syndrome (XanaFX study). This is a randomised, placebo-controlled trial, which should soon start enrolling patients, with the results expected in 2023. The third indication is major depressive disorder (MDD), which is based on the rationale that elevated cortisol levels have been associated with depression. A Phase II trial should start in 2022.

### **INDUSTRY OUTLOOK**

The unmet need in chronic neurological and neuropsychiatric disorders is high due to limited available treatment options. While orphan indications like Fragile X syndrome provide a potentially faster route to market and higher drug pricing, MCI due to AD, as well as MDD, represent much larger markets.

# AFT Pharmaceuticals (AFT)

### **INVESTMENT SUMMARY**

AFT Pharmaceuticals is a profitable New Zealand-based specialty pharmaceutical company that sells 125 proprietary branded and generic products through its own sales force in New Zealand and Australia with offices in SE Asia and Europe to handle its growing export business. In H122, operating revenue grew strongly by 14% y-o-y to NZ\$55.5m, despite the impact of COVID-19 across the business (extended lockdowns in Australia and delayed launches in international markets were the biggest COVID-19 related headwinds). Reported group operating profit was NZ\$5.5m compared to NZ\$2.4m in the same period a year ago. Importantly, AFT is continuing to guide for operating profit of NZ\$18–23m in FY22.

### **INDUSTRY OUTLOOK**

AFT is a multi-product company targeting pharmacy prescription, OTC and hospital markets. Data for Maxigesic offer it a competitive advantage in a fragmented industry.

# Analyst

Dr Jonas Peciulis

# AlzeCure Pharma (ALZCUR)

# INVESTMENT SUMMARY

AlzeCure is a pure play biotech focused on neurological disorders. The pipeline consists of three small-molecule platforms targeting AD and pain. The NeuroRestore platform, with lead asset ACD856, is focused on novel symptomatic treatment of AD. The Phase I SAD part with ACD856 has been completed and the MAD part of the trial is ongoing. The Alzstatin platform (preclinical) is specifically aimed at modifying the course of AD. We find the strategy to target both settings in AD as a rational approach given the complex history of drug development in this vast indication. The third Painless platform consists of two non-opioid pain assets: ACD440, a topical treatment for neuropathic pain (Phase Ib data presented, planning to file for Phase II); and preclinical project TrkA-NAM for osteoarthritic and other severe pain (a drug candidate should be announced soon).

### **INDUSTRY OUTLOOK**

Treatments for progressive neurodegenerative disorders, such as AD, remain a significant focus for the industry despite few treatment options being successfully developed available. Mild cognitive impairment due to AD is a large, unmet medical need. Likewise, non-opioid based analgesics for the treatment of pain are of growing interest.

# **Arovella Therapeutics (ALA)**

### **INVESTMENT SUMMARY**

Historically a drug delivery company focused on reformulating established drugs into oro-mucosal spray (via its OroMist platform) formulations for better bioavailability, Arovella Therapeutics pivoted its focus towards the immunoncology space (in particular cell therapies) following the in-licensing in CY21 of two chimeric antigen receptors (CARs) based immunotherapies (both in preclinical stage). The first was an invariant natural killer T (iNKT) cell therapy platform in-licensed from Imperial College London in July 2021. The platform can be combined with CARs to target blood cancers, with a potential of being an allogeneic 'off-the-shelf' therapy. This was followed by the in-licensing of a novel monoclonal antibody targeting a Dickkopf-1 (DKK1) peptide from MD Anderson Cancer Center in December 2021. Arovella plans to combine the DKK1 targeting technology with the iNKT cell therapy platform in future. With recent fund-raising activity, we believe the company has sufficient funds to run its clinical studies till CY23.

### INDUSTRY OUTLOOK

ALA is targeting very large markets including insomnia (through ZolpiMist) and various cancers (through the CAR-iNKT programme and anagrelide).

# Basilea Pharmaceutica (BSLN)

# INVESTMENT SUMMARY

In February Basilea announced a strategic refocusing of its core anti-infective business in 2022, which it is separating out from its oncology assets for which it is exploring strategic options. Strong FY21 results were driven by key anti-infective assets, Cresemba and Zevtera, which contributed 65% of the year's non-deferred revenue growth. Global Cresemba sales were over US\$300m in FY21 resulting in significantly increased royalty and milestone payments. Management envisages sustainable profitability and positive operating cashflow from 2023. Basilea is awaiting results from the key ERADICATE study of Zevtera in bloodstream infections (top-line data in mid 2022). If positive, this will complete the data package needed for NDA submission, paving the way for entry to the US antibiotic market. In oncology, potential value uplift could come from positive readouts from lead asset derazantinib in trials for intrahepatic cholangiocarcinoma (FIDES-01) and gastric cancer (FIDES-03). Readouts are expected from both in H122. Our estimates are under review.

### **INDUSTRY OUTLOOK**

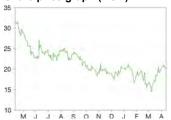

There is an ever-increasing need for therapeutic agents that are efficacious against drug-resistant strains of bacteria (eg MRSA), fungus or cancer. Hence, the opportunities for Cresemba, Zevtera and Basilea's oncology pipeline could be significant.

Dr Jonas Peciulis

# BerGenBio (BGBIO)

### **INVESTMENT SUMMARY**

BerGenBio (BGBIO) is a pioneer in AXL biology and its lead asset bemcentinib is being investigated for AML, NSCLC and COVID-19. AXL is a negative prognostic marker in most cancers, but also implicated in fibrosis and viral infections. AXL inhibition can counter drug resistance, stop immune suppression and potentially augment the efficacy of other drug classes. Initial efficacy data for bemcentinib in relapsed AML look promising and discussions are ongoing with FDA on the design of a potentially pivotal study due to start H222. In NSCLC, data from a Phase II trial are expected in H122 and will provide a better picture of bemcentinib's potential use in the second-line treatment setting. BGBIO will also pursue a first-line opportunity focusing on patients with STK11 mutations and plans to initiate a Phase Ib in H122. For COVID-19, BGBIO will use the EU-SolidAct platform trial to confirm initial efficacy signals observed across two Phase II trials.

### INDUSTRY OUTLOOK

Understanding the tumour microenvironment and why even with initial positive response to treatment, cancers often exhibit tumour proliferation, metastasis and treatment resistance is becoming an ever-more critical focus area. The role of AXL is becoming increasingly defined in tumorigenesis, propagation and treatment resistance.

# Cantargia (CANT)

# INVESTMENT SUMMARY

Cantargia is developing antibodies against IL1RAP. Data from its Phase IIa CANFOUR trial, investigating nadunolimab in first-line non-small cell lung cancer (NSCLC) and pancreatic ductal adenocarcinoma (PDAC), support the hypothesis that nadunolimab has a synergistic benefit with chemotherapy. Cantargia reported latest positive efficacy data update from the PDAC arm of CANFOUR in December 2021, while the latest available data from the NSCLC arm was presented at the ESMO Congress in September 2021. With these data, Cantargia is preparing for the Phase II/III trial in metastatic PDAC in collaboration with PanCAN. Nadunolimab is now being investigated (or about to be) in eight different cancers and in a variety of combinations. The goal of this expansion beyond the original CANFOUR trial is to accumulate a comprehensive data package, which will position Cantargia well to design the next stage development and enter potential partnership negotiations.

## INDUSTRY OUTLOOK

Increasing understanding of inflammation in malignant processes now includes findings that cytokines are not only produced by the immune cells, but that cancer itself can produce certain cytokines and the associated receptors to escape from the immune response. Therefore, cytokines represent a potentially promising class of targets in oncology.

Jacob Thrane

# Carmat (ALCAR)

### **INVESTMENT SUMMARY**

Carmat continues to make progress in the development of its physiologic heart replacement therapy (PHRT). The company announced that it had implanted nine of its PHRTs since July 2021, six of which were commercial implants while three were part of the early feasibility study (EFS) in the United States. These nine implants are associated with approximately €2m in product revenue, to be booked in H221. However, Carmat suffered a serious set-back in late 2021 due to device malfunction leading to the death of two patients. The implants are currently being revised in close dialogue with the regulatory bodies and guidance is for sales and clinical trials to resume in Q422. Moreover, Carmat is currently looking to prepare the next financing round, stating a cash runway until July 2022.

### **INDUSTRY OUTLOOK**

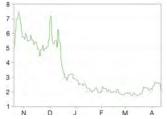

The Carmat artificial heart is being developed as a permanent replacement or destination therapy for chronic biventricular heart failure or acute myocardial infarction patients who do not have access to a human donor heart.

# **Context Therapeutics (CNTX)**

# INVESTMENT SUMMARY

Context Therapeutics is a Nasdaq-listed biopharma company developing novel therapeutics focused on women's oncology indications. Lead programme onapristone extended release (ONA-XR) is a potential first-in-class progesterone receptor (PR) antagonist being evaluated in several mid-stage clinical programmes in advanced HR+/HER2- breast as well as hormone-driven endometrial and ovarian cancer, all areas with significant unmet need and all expected to release preliminary data in 2022. The other asset CLDN6xCD3, is a novel bi-specific monoclonal antibody, acquired in April 2021 and being assessed in endometrial and ovarian cancers. The company held an investor webinar on 13 April to review data from the presentations it made on ONA-XR and CLDN6xCD3 at the American Association for Cancer Research conference.

### **INDUSTRY OUTLOOK**

According to the American Cancer Society, there were an estimated 284,200 breast cancer cases, 66,570 endometrial cancer cases and 21,410 ovarian cancer cases in the US in 2021 (more than 70% of these are hormone-driven). Long-term survival rates remain low in the metastatic setting (c 30% for HR+/HER2- breast cancer) despite recent advances, highlighting the high unmet need in the space.

### **INVESTMENT SUMMARY**

Creo Medical is developing and commercialising minimally invasive electrosurgical devices. Its CROMA platform delivers a combination of bi-polar radiofrequency (RF) and microwave energy for the purpose of dissection, resection, ablation and haemostasis of diseased tissue. The initial focus will be on gastrointestinal (GI) procedures but will expand into soft tissues (such as the pancreas) and pulmonology. The company has had all six products within the CROMA platform CE marked and four are also cleared for use by the FDA, with the other two expected to be cleared in the coming months.

### **INDUSTRY OUTLOOK**

Creo Medical products are in a large and lucrative market. Conmed estimates the GI endoscopic technologies market is approximately \$3.0–3.2bn with the RF energy based surgical device market at \$2.7–2.9bn per year.

# Analyst

Nidhi Singh

# Diurnal Group (DNL)

# INVESTMENT SUMMARY

Diurnal's strategy is to develop hormone therapeutics for lifelong treatment for rare and chronic endocrine conditions including congenital adrenal hyperplasia (CAH), adrenal insufficiency (AI), hypogonadism and hypothyroidism. The company first launched Alkindi, a formulation of hydrocortisone intended to treat AI in paediatric patients. Efmody, an oral modified-release formulation of hydrocortisone, has been approved in the EU and UK, and subsequently launched in Germany, UK and Austria, to treat CAH in individuals aged 12 years and older. While the sudden departure of the CEO, the Scottish Medicines Consortium issues with Efmody and lowered guidance have provoked short-term investor anxiety, the company appears to be continuing with the current business plan.

# INDUSTRY OUTLOOK

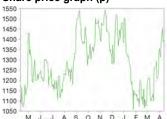

The company's lead products, Alkindi and Efmody, are treatments for deficiencies in the hormone cortisol (aka hydrocortisone). Al affects 250–400 per million individuals in the United States and Europe. A smaller fraction (1/10,000 to 1/18,000 live births) are born with CAH, for which Efmody is approved in Europe.

# Ergomed (ERGO)

### **INVESTMENT SUMMARY**

Ergomed's FY21 results showed that adjusted EBITDA of £25.4m was ahead of our estimate of £24.0m and consensus of £23.4m. A strong order book (£239.7m, up 24.2% y-o-y), continued overall business growth and a rapidly improving balance sheet position the company for another solid year of growth. Ergomed recently acquired ADAMAS Consulting Group. ADAMAS is a UK-based quality assurance services provider and will diversify revenue sources (its offerings do not overlap with Ergomed's). The acquisition should also immediately be accretive to earnings, according to management.

### **INDUSTRY OUTLOOK**

Innovation in healthcare is driving sales and growth in the number of clinical trials being initiated, as pharmaceutical and biotechnology companies continue to invest substantially. Tight operational control and execution will enable Ergomed to drive market share in high-growth orphan drug trials as well as in larger indications.

# Immunicum (IMMU)

# INVESTMENT SUMMARY

Following the transformational merger with DCprime, Immunicum aims to become a global leader in off-the-shelf, allogeneic cell therapies, using its expertise in DC biology. It has two advanced clinical-stage pipeline products, addressing both solid tumours and haematological malignancies. Ilixadencel is being developed as an immune primer in combination with anti-cancer therapies, while DCP-001 is aimed at reducing the risk of cancer relapse after standard of care. DCP-001 is currently in two clinical trials: Phase II in AML (ADVANCE-II) with first efficacy data released in December 2021; and Phase I in ovarian cancer (ALISON) with the first patient recruited in June 2021.

### **INDUSTRY OUTLOOK**

IO is a frenetic pharmaceutical development area with many clinical combination studies being conducted by pharmaceutical and biotech companies. Investors should expect relatively rich newsflow from this subsector over the next few years.

# InMed Pharmaceuticals (INM)

### **INVESTMENT SUMMARY**

InMed Pharmaceuticals' (INM's) Q222 financial results reflect its evolution from a pure-play biotech firm to one with commercial sales to the health and wellness market, with revenues of \$0.3m, all cannabichromene. In January 2022 it also began selling cannabicitran to the health and wellness market. The now-completed BayMedica acquisition boosts INM's product portfolio for rare cannabinoids and rounds out its manufacturing capabilities. The company continues to advance its drug development programs, including the ongoing 755-201-EB Phase II trial and preparing for an INM-088 FDA pre-investigational new drug meeting to treat glaucoma.

### **INDUSTRY OUTLOOK**

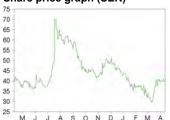

The market for cannabinoids, whether FDA-approved, medical or recreational, is growing at a fantastic rate. Legal cannabis sales in the United States alone were around US\$7.5bn in 2017 and we expect them to grow to US\$28bn by 2023.

# **IRLAB Therapeutics (IRLABA)**

# INVESTMENT SUMMARY

IRLAB Therapeutics is focused on developing novel, potential first-in-class treatments for the symptoms of Parkinson's disease (PD) and other central nervous system disorders. IRLAB's proprietary ISP research platform is at the heart of its discovery engine and has been validated by the progress of its two lead assets, mesdopetam and pirepemat, which have novel mechanisms of action. Pirepemat is an oral prefrontal cortex enhancer currently in development for the treatment of impaired balance and falls in PD; a global Phase Ilb study is expected to start shortly. Mesdopetam, an oral D3 antagonist, is currently in a global Phase Ilb/III study for levodopa-induced dyskinesias and top-line data are expected in H222. A global licensing deal (worth up to \$363m) for mesdopetam puts all future clinical development and commercialisation in the hands of partner lpsen, enabling IRLAB to focus on its preclinical pipeline which consists of IRL942, IRL 757 and compounds from its P003 programme. IRLAB is well funded in the medium term.

### **INDUSTRY OUTLOOK**

PD is characterised by a triad of cardinal motor symptoms, although non-motor symptoms are as debilitating and remain undertreated. Despite substantial efforts to develop disease-modifying approaches in PD, symptomatic treatment remains the mainstay.

# Kazia Therapeutics (KZIA)

### **INVESTMENT SUMMARY**

Kazia is developing the anti-cancer compound paxalisib (GDC-0084) for glioblastoma (GBM) multiforme. Paxalisib is a PI3K inhibitor, a well understood class with activity across a wide range of tumour types and multiple previously approved drugs. Paxalisib, unlike other drugs of this class, can cross the blood brain barrier (BBB), opening the potential to treat cancers of the brain. The pivotal GBM AGILE study is currently enrolling patients. The second product candidate is EVT801, a novel small molecule inhibitor VEGFR3. A Phase I trial of EVT801 in solid tumours recently started enrolling patients.

### **INDUSTRY OUTLOOK**

GBM is the most common primary cancer of the brain with 11,500 new cases reported in the United States per year. There are very limited treatment options for GBM and there is a very low survival rate. Paxalisib is currently being developed for use in the adjuvant setting after initial resection and radiation treatment. EVT801 will target the multi billion dollar angiogenesis cancer market.

# MagForce (MF6)

# INVESTMENT SUMMARY

MagForce is progressing its strategy to drive uptake of its nanoparticle-based NanoTherm therapy for the treatment of prostate cancer in the United States and glioblastoma (GBM) in Europe. Four treatment centers in Europe are commercially treating GBM patients (Germany and Poland) and MagForce recently signed a cooperation agreement with a nospital in Spain, treatments are expected to start in H122. Negotiations with clinics in Italy and Austria are ongoing. The pivotal US trial for the treatment of intermediate risk prostate cancer is progressing, having successfully completed the first two stages. MagForce has now received FDA approval for the final protocol and initiated Stage 2b. The study should complete by mid-2022, potentially enabling approval and launch by H123. Loan facilities are in place to bridge the gap until profitability, with €11m zero interest bearing convertible notes and a €22m EIB loan facility remaining. Our forecasts are under review.

## INDUSTRY OUTLOOK

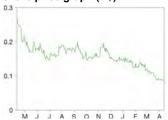

MagForce's NanoTherm therapy system is designed to directly target cancerous tissue while not damaging surrounding healthy tissue. Superparamagnetic nanoparticles are directly instilled into the tumour or resection cavity and then activated by the NanoActivator device. This can either thermally ablate tumours or sensitise them to other treatments.

### **Analyst**

Dr Jonas Peciulis

# Medlab Clinical (MDC)

### **INVESTMENT SUMMARY**

Medlab's proprietary platform, NanoCelle, is a patented nanomicellar formulation that can improve the delivery of drugs. Medlab's lead product is NanaBis, a combination of THC and CBD (1:1) cannabinoids encapsulated in NanoCelle particles, which enable a convenient buccal spray formulation. A recent breakthrough was Medlab's announcement that it had successfully produced a synthetic version of NanaBis, which will allow it to move away from a botanical extract. Once the product reformulation is completed, NanaBis will re-enter clinical development (potentially Phase III) as a fully synthetic, non-opioid pain relief drug aimed at a vast market. Using NanoCelle delivery technology, Medlab is also expanding beyond cannabinoids and is pursuing several small and large molecule programmes (including a non-invasive mRNA COVID-19 vaccine).

### INDUSTRY OUTLOOK

There is a growing consensus in the medical community that medicinal cannabis has a place in chronic pain management. With the opioid crisis unravelling, we believe support for non-opioid pain killers from various stakeholders will only grow.

# Mesoblast (MSB)

# INVESTMENT SUMMARY

Mesoblast is an Australia-headquartered biotechnology company focused on its pipeline which is based on proprietary mesenchymal precursor cells (MPC) and culture-expanded mesenchymal stem cells (MSC) technologies. Novartis signed a partnership with the company to develop remestemcel-L for acute respiratory distress syndrome (ARDS), whether or not the ARDS was caused by COVID-19. Mesoblast recently met with the FDA on the path forward in COVID-19 related ARDS and another trial is necessary for authorisation. The company also announced data from its MPC-06-ID back pain trial. Rexlemestrocel-L in combination with hyaluronic acid significantly reduced pain and reduced the need for opioids. In the heart failure trial, Revascor had a significant impact on major adverse cardiovascular events such as cardiovascular death and ischemic events.

### **INDUSTRY OUTLOOK**

Mesoblast is a leading MSC company based in Australia. It is targeting large indications such as ARDS, congestive heart failure and back pain.

### **INVESTMENT SUMMARY**

Midatech is a drug-delivery technology company with three key platforms focusing on commercialising and developing products in central nervous system, anti-organ-rejection and brain cancer. The core asset, Q-Sphera, is a sustained release technology; proprietary microspheres that can be tailored to deliver a precise release profile for numerous drugs. The second asset, MidaSolve, is a nanosaccharide technology used to liquefy inherently insoluble drugs to aid local delivery to disease area. Its lead asset, MTX110, is undertaking clinical studies in aggressive brain cancers such as glioblastoma multiforme and diffuse intrinsic pontine glioma, a very rare pediatric cancer.

### **INDUSTRY OUTLOOK**

The proprietary platforms develop products that address debilitating conditions with significant clinical needs. Applications are expected to be out-licensed for development following proof of concept.

# **Newron Pharmaceuticals (NWRN)**

# INVESTMENT SUMMARY

Newron is developing evenamide (30mg twice per day) as an add-on to treat poorly managed and resistant schizophrenia. A potentially pivotal Phase II/III study (008A) is underway and could report by Q422. Further US studies will be needed. Newron hopes to partner evenamide for larger indications and to sell the product directly for clozapine-resistance. H121 results showed Xadago royalties of €2.65m, up 6.5% versus H120. Newron had cash plus loan facilities at end June totalling €36.9m plus Xadago royalties to fund it into 2023.

# INDUSTRY OUTLOOK

Xadago is marketed as an add-on to levodopa therapy in PD. It is sold by Zambon in Europe and by Supernus in the United States. The additional study on a dyskinesia indication should start in Q122 and could eventually boost US sales. Generic manufacturers have notified the FDA of their intention to file generic Xadago products. Newron is contesting these filings. After 2022, Xadago is protected by a set of patents, which expire no earlier than 2027 if upheld.

# Nicox (cox)

### **INVESTMENT SUMMARY**

Nicox develops drugs for eye diseases, with lead candidate NCX-470 in Phase III trials targeting the topical ocular treatment of glaucoma. NCX-470 combines an NO-donating molecule with an analogue of established prostaglandin F2a drug, bimatoprost. NCX-470 0.065% has shown up to 1.4mmHg additional lowering of intraocular pressure (IOP) compared to latanoprost in the Phase II study, and the Phase III programme is testing a higher 0.1% drug concentration. Nicox is also advancing NCX-4251 for dry eye disease following a positive post-hoc analysis of its Phase IIb trial data.

### **INDUSTRY OUTLOOK**

NCX-470, if approved, could become the most efficacious single-agent glaucoma drug on the market in terms of IOP-lowering activity. Mont Blanc, the first of two Phase III NCX-470 studies, recently exceeded 90% enrolment and results are expected in Q123. We expect a H225 launch and sales of c €500m in 2031 in the United States and major markets. Nicox had €41.9m gross cash at Q421, which we model should last into 2024.

# Onxeo (ONXEO)

# INVESTMENT SUMMARY

Onxeo recently announced in a major update that it has appointed a new CEO, Dr Shefali Agarwal. Onxeo's portfolio focuses on its novel platON platform with AsiDNA as the lead drug candidate. AsiDNA is the only oligonucleotide decoy agonist in development that disrupts and exhausts the tumour DNA damage response mechanism. To date, the only approved similar class of drugs are several commercially successful PARP inhibitors. AsiDNA has completed the Phase Ib part of the DRIIV-1 trial in patients with advanced solid tumours in combination with chemotherapy demonstrating a favourable safety profile. Another key Phase Ib/II trial, REVOCAN, is recruiting patients and will evaluate AsiDNA's potentially unique ability to reverse tumour resistance to the PARP inhibitor, niraparib. The outcome will define AsiDNA's mid- to late-stage development.

### **INDUSTRY OUTLOOK**

Approval of the first PARP inhibitors has kick-started interest by the scientific community and large pharma in the DNA damage response field. Few biotechs are already positioned in this emerging field, which has broad potential.

# OpGen (OPGN)

### **INVESTMENT SUMMARY**

OpGen is a diagnostic company focused on the identification and treatment of bacterial infections. It has a broad product portfolio of molecular diagnostic tests including the Unyvero platform with five CE-IVD-marked tests and two cartridges cleared by the FDA; Ares Genetics' next-generation antimicrobial resistance (AMR) testing services; 510(k) cleared Acuitas AMR Gene Panel in bacterial isolates; and the Al-powered AMR database. OpGen's products are differentiated by their short turnaround time (eg the Acuitas AMR Gene Panel test takes 2.5 hours versus one to four days using traditional methods). OpGen reported revenue of \$4.3m (better than expected) in FY21 and management expects to record stronger growth in FY22, given the significant focus on commercialisation.

### **INDUSTRY OUTLOOK**

It currently takes days to test a patient sample to find out if they have an infection, what they are infected with and to which drugs that infection might be susceptible. This can lead to a delay in treatment or the wrong treatment being prescribed. According to the Centers for Disease Control and Prevention, there are over two million cases of drug-resistant bacterial infections every year.

# **Oryzon Genomics (ORY)**

# INVESTMENT SUMMARY

Oryzon develops small molecule inhibitors for epigenetic targets. The two lead drugs are iadademstat for oncology and vafidemstat for central nervous system (CNS) indications (both are lysine-specific demethylase 1A, or LSD1, inhibitors). The company's R&D strategy has been to select indications where there is a scientific rationale for intervention with an epigenetic therapy and then conduct quick and relatively small trials, but with patient sample sizes still sufficient to obtain proof-of-concept data. With this strategy, Oryzon has completed multiple trials over the last several years. Importantly, insights from the data have allowed the company to design the next phase of development. At least two new trials with iadademstat (FRIDA in acute myeloid leukaemia and STELLAR in small cell lung cancer, SCLC) could potentially be pivotal.

### **INDUSTRY OUTLOOK**

Oryzon is among the leading clinical stage drug developers with a second generation of epigenetic therapeutics, which have greater selectivity and potentially a favourable safety/efficacy profile than the first generation HDAC inhibitors.

# should provide continued catalysts and hence support the share price.

OSE has products in development for both immunological diseases and various cancer indications. As a result, the R&D pipeline is diversified and the outlook does not depend on developments in any specific subsector.

**OSE Immunotherapeutics** (OSE)

OSE Immunotherapeutics (OSE) focuses on both oncology and immune disorders.

Long-term collaborations with top research institutions enable it to identify novel targets in a

cost-effective manner, which was particularly evident from the broad and balanced R&D pipeline. First, positive data from the Phase I study of BI 765063 (SIRPa antagonist) in solid

tumours were presented at ASCO and ESMO conferences last year. This asset is partnered

with Boehringer Ingelheim in a deal worth €1.1bn plus royalties. One of last year's highlights was the FR104 (a CD28 antagonist) licensing deal signed with Veloxis in the organ transplantation setting for a total of up to €315m in milestones plus royalties. OSE is also working on CoVepiT, a multi-epitope COVID-19 vaccine that could provide protection against emergent variants. Upcoming newsflow from many other projects in the pipeline

# Oxford Biomedica (OXB)

# INVESTMENT SUMMARY

**INVESTMENT SUMMARY** 

**INDUSTRY OUTLOOK** 

Oxford Biomedica (OXB) is a global leader in lentiviral development and manufacturing. It is expanding its manufacturing facilities through Oxbox, a 84,000 sq ft state-of-the-art bioprocessing facility, significantly increasing its production capacity to match increasing demand and to continue growing its platform revenues. In the near term, revenues will continue to be driven by Novartis and AstraZeneca as rollout of Kymriah and the COVID-19 vaccine continues, as well as new partner programmes such as those from Bristol Myers Squibb (BMS). OXB has several established development and manufacturing partnerships including Novartis, Juno Therapeutics (BMS), Orchard Therapeutics, Boehringer Ingelheim, Santen, Beam Therapeutics and PhoreMost. OXB also has a supply agreement with AstraZeneca for the large-scale commercial manufacture of the adenovirus vector-based COVID-19 vaccine Vaxzevria (AZD1222). Our forecasts are under review.

### **INDUSTRY OUTLOOK**

Cell and gene therapy is the focus of much industry attention as it can dramatically alter the outcomes of many diseases. OXB's proprietary LentiVector platform has demonstrated promise in many indications

# Pharnext (ALPHA)

### **INVESTMENT SUMMARY**

Pharnext's pleotherapy platform uses a combination of in silico prediction of drug effects as well as in vitro screening to find drug combinations that have biochemical effects totally outside of their canonical activities. For instance, the company's lead programme PXT3003 is a triple combination of an anti-opiate (naltrexone), a drug for spasms (baclofen), and the sweetener sorbitol, but the combination has shown positive interim results in Phase III for Charcot-Marie-Tooth type 1A (CMT1A) disease.

### **INDUSTRY OUTLOOK**

The power of the pleotherapy platform lies in its ability to predict gene expression patterns as a result of different drug combinations. This provides a way of addressing diseases of a genetic origin like CMT (and potentially other types of disease) that may not be amenable to other treatments like enzyme replacement therapy.

# Pixium Vision (PIX)

# INVESTMENT SUMMARY

Pixium Vision is developing the Prima wireless photovoltaic sub-retinal implant, which transforms images into electrical signals to elicit a form of central visual perception in patients with severe retinal disease. Positive 36-month data from its EU feasibility study in patients with geographic atrophy associated with dry age-related macular degeneration (GA-AMD) showed sustained improvements on the Landolt C visual acuity scale versus baseline, and continued implant safety and stability.

### INDUSTRY OUTLOOK

Pixium started the PRIMAvera European pivotal study in Q420 and plans to complete enrolment by year end 2022, which we believe could lead to top-line data being reported in late 2023 or early 2024. GA-AMD is a leading cause of blindness in older adults, affecting over 2.5 million persons in the United States and Europe, and there is no approved treatment. Pixium reported €14.5m gross cash at 31 December 2021, which we believe should fund operations into 2023.

# RhoVac (RHOVAC)

### **INVESTMENT SUMMARY**

RhoVac's Phase IIb BRaVac trial has been fully enrolled since September 2021. According to the latest guidance, key results are expected in May or June 2022, which is the most significant catalyst of the investment case so far. RhoVac's lead asset is RV001, a tissue-agnostic cancer immunotherapy. It contains a fragment of the target protein RhoC, which is overexpressed in cells with metastatic potential in various cancers. The BRaVac trial investigates RV001 in prostate cancer patients with localised disease who have relapsed after treatment with curative intent. The latest interim safety review in July 2021 found no issues.

### **INDUSTRY OUTLOOK**

Metastatic cancer is the most advanced stage of cancer and forms the bulk of the current prostate cancer therapy market. RhoVac's target group is focused on non-metastatic patients with biochemical failure and are several times more prevalent than metastatic patients. Preventing or halting metastasis formation in this group of patients by inhibiting the metastatic cascade or killing cells with metastatic potential could reduce morbidity and improve survival.

# Analyst

Pooya Hemami

# Sequana Medical (SEQUA)

# INVESTMENT SUMMARY

Sequana's alfapump and Direct Sodium Removal (DSR) platforms are being advanced as long-term treatments for diuretic-resistant fluid overload related to liver disease, malignant ascites and heart failure (HF). The alfapump removes localised excess fluid build-up in the peritoneal cavity, and its initial commercial opportunity is for treating fluid overload (ascites) resulting from liver disease including non-alcoholic steatohepatitis. DSR technology adds a complementary method for removing excess fluid that is spread all over the body and the combined approach, alfapump DSR, is being advanced as a therapy for HF patients affected by congestion (fluid overload).

### **INDUSTRY OUTLOOK**

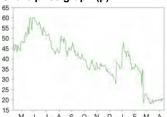

The alfapump is undergoing a pivotal North American registration study (POSEIDON) and is already commercialised in parts of Europe. Sequana recently completed POSEIDON implantations and expects to report primary efficacy data in Q422 and submit a US regulatory application for alfapump in mid-2023. The alfapump DSR system was shown in the RED DESERT study to sustainably improve diuretic response and cardio-renal status, and Sequana reported positive interim data in the SAHARA DESERT alfapump DSR study in decompensated HF patients in Q421.

# INVESTMENT SUMMARY

Shield Therapeutics (STX)

Shield Therapeutics is a commercial-stage speciality pharmaceutical company based in the UK. Its primary focus is the commercialisation of Feraccru/Accrufer (oral ferric maltol), approved by the EMA and FDA for the treatment of iron deficiency in adults, with or without anaemia. The commercialisation of Feraccru in Europe, Australia and New Zealand is in the hands of distribution partner Norgine, and the product has been licensed to ASK Pharm in China, Korea Pharma in South Korea, and KYE Pharmaceuticals in Canada. Shield is commercialising Accrufer itself in the United States and launched the product in July 2021. At 31 December 2021 Shield had an unaudited cash balance of £12.1m. This is sufficient to enable it to establish and expand its US commercial infrastructure to include 30–60 sales reps to support the initial product launch.

### **INDUSTRY OUTLOOK**

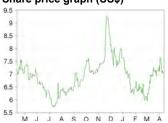

The market for iron deficiency is substantial and Feraccru/Accrufer is a unique oral formulation of iron developed to overcome the side-effect profile of salt-based oral iron therapies and provides an alternative treatment to intravenously administered iron.

# SIGA Technologies (SIGA)

# INVESTMENT SUMMARY

SIGA recently reported solid growth in FY21, with revenues up 9.8% y-o-y to \$133.7m, as the US Biomedical Advanced Research and Development Authority exercised its procurement option valued at \$112.5m. The company also enjoyed international growth as Canadian sales jumped from \$2m to nearly \$13m, and the recent Health Canada and EMA approvals for TPOXX should support SIGA's geographic expansion. Its post-exposure prophylaxis program has started the immunogenicity trial with TPOXX and Jynneos's orthopox vaccine.

# INDUSTRY OUTLOOK

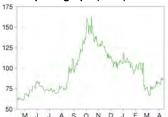

Smallpox is a very serious life-threatening disease caused by the variola virus. The literature suggests a death rate of up to 30% (compared to around 2% for COVID-19). According to CDC forecasts, over 50 million people could be infected in a smallpox outbreak.

Dr Jonas Peciulis

# Ultimovacs (ULTI)

### **INVESTMENT SUMMARY**

Ultimovacs is a biotechnology company focused on developing a next generation cancer vaccine with virtually universal potential. Lead asset, UV1, activates the immune system to recognise cancer cells that express human telomerase reverse transcriptase (hTERT, or telomerase), which is present in over 85% of all cancer types. For this reason, UV1 has broad potential in a variety of cancers and in combination with other treatments. Ultimovacs' R&D strategy is to combine UV1 with checkpoint inhibitors due to an expected treatment synergy. The broad R&D programme includes five Phase II trials in different solid tumours, which will enrol more than 600 patients in total. Readouts are expected over 2022/24, all within cash reach. In October 2021, the latest update of data from a Phase I trial of UV1 in advanced melanoma in combination with Keytruda continued to show an impressive ORR benefit.

### INDUSTRY OUTLOOK

Novel drug projects in oncology comprise the lion's share of total R&D investments in the industry. Around 85% of all cancer types express high levels of hTERT, which means that UV1 has a broad potential in a variety of different settings, including combinations with other cancer treatments.

# INVESTMENT SUMMARY

Vivesto is focused on developing improved formulations of well-established cancer drugs through the application of its proprietary XR-17 platform. This solubility enhancing technology has received validation though a global partnership deal for lead asset Apealea (Cremophor-free paclitaxel) with Elevar Therapeutics across a variety of cancers. Apealea is approved in Europe for second-line ovarian cancer and will be launched by Inceptua in H122. Additional studies are expected to be required before an NDA filing in the United States. Vivesto is working on additional nanoparticle formulations, including docetaxel micellar (Phase Ib prostate cancer) and the development of innovative drugs (preclinical stage). In-licensed asset Cantrixil is expected to start Phase II development in ovarian cancer. In March, Vivesto completed a rights issue raising gross proceeds of c SEK151m, our forecasts are under review.

# INDUSTRY OUTLOOK

Despite a slew of novel cancer drugs transforming care for many oncology indications, established chemotherapy regimens remain a cornerstone of treatment. Vivesto's XR-17 technology is applicable to any solubility limited drug, which includes 10–15 different cytostatic agents, and can potentially provide an improved formulation and profile.

# **Glossary**

AACD	American Accepiation for Concer Decearch
AACR AAV	American Association for Cancer Research
ABSSSI	Adeno-associated virus  Acute bacterial skin and skin structure infections
Accelerated approval	Anterior chamber
Accelerated approval	Faster FDA approval based on a surrogate endpoint for drugs that fill an unmet medical need for
۸۵۲۰	serious conditions. Phase IV confirmatory trial required post-approval to demonstrate clinical benefit
ACEs	Angiotensin converting enzymes
ADO	Alzheimer's disease
ADC	Antibody-drug conjugate
AdCom	FDA Advisory Committee meeting
ADHD	Attention deficit hyperactivity disorder
ADME	Absorption, distribution, metabolism and excretion
AdV	Adenovirus
AEs	Adverse events
AfDC	Affimer drug conjugates
AGvHD	Acute graft vs host disease
AH	Aqueous humour
Al	Adrenal insufficiency
AKI	Acute kidney injury
ALL	Acute lymphoblastic leukaemia
AM	Alpha-mannosidosis
AMF	Alternating magnetic field
AMI	Acute myocardial infarction
AML	Acute myocardian infaction  Acute myeloid leukaemia
ANDA	Abbreviated new drug application
AOBP	Automated office blood pressure
APD	Atypical antipsychotic drugs
APPA	Active pharmaceutical ingredient
APPA	American Pet Products Association
AR	Augmented reality
ARBs	Angiotensin receptor blockers
ARDS	Acute respiratory distress syndrome
ASCO	American Society of Clinical Oncology
ASCT	Autologous stem cell transplantation
ASD	Autism spectrum disorder
AUC	Area under the curve (total drug exposure over time)
B-ALL	B-cell acute lymphoblastic leukaemia
BARDA	Biomedical Advanced Research and Development Authority (US agency that supports research into
	drugs, vaccines and other products that are considered priorities for national health security)
BBB	Blood-brain barrier
BC	Breast cancer
BCAL	Breast cancer-associated secondary lymphedema
BDNF	Brain-derived neurotrophic factor
BE	Bronchiectasis
BET	bromodomain and extraterminal domain proteins
bid	Twice daily (prescription)
BLA	Biologics License Application (FDA filing approval for biologic drugs)
BLC	Blue light cystoscopes
BM	Bone marrow
BMBC	
	Brain metastases from breast cancer
BMI	Body mass index
BMs	Brain metastases
BMT	Bone marrow transplantation
B-NHL	B-cell non-Hodgkin lymphoma
BOI	Burden of illness study
BPD	Borderline personality disorder
BTC	Biliary tract carcinoma
BTD	Breakthrough therapy designation (Expediates development and FDA review of drugs intended to treat a serious condition and may demonstrate substantial improvement on available therapies)
BTR	Bridge-to-recovery
BTT	Bridge-to-transplant
BVS	Bionic vision system
CABP	Community-acquired bacterial pneumonia
CAH	Congenital adrenal hyperplasia
Cancer stages	a contractions
	The cancer or tumour is small and is still in the place that it started and hasn't spread to nearby tissue
   -	The cancer or tumour is larger and may have spread to the surrounding tissue and/or lymph nodes
IV	The cancer has spread to one or more other organs of the body and is considered metastatic
	2221. Had options to site of mile of the body and is defined in the body

CAR-T	Chimeric antigen receptor T cell
CBD	Hemp-derived cannabidiol
CBN	Cannabinol
ccRCC	Clear cell renal cell carcinoma
CDC	Centers for Disease Control and Prevention (US agency that aims to protect public health through the control and prevention of disease, injury and disability)
CDK	cyclin-dependent kinase
CDMO	Contract development and manufacturing organisation
CDx	Companion diagnostic
CE mark	Notified body issued authorisation for medical devices that pass the conformity assessment (health,
	safety and environmental protection) and are sold in the European economic area
CEC	Circulating endothelial cells
CF	Cystic fibrosis
CGT	Cell and gene therapies
cGvHD	Chronic graft vs host disease
CHF	Congestive heart failure
CHMP	Committee for Medicinal Products for Human Use (a committee of the EMA)
CINV	Chemotherapy-induced nausea and vomiting
CKD	Chronic kidney disease
CLL	Chronic lymphocytic leukaemia
Cmax	Maximum concentration of drug exposure
CMO	Contract manufacturing organisation
CMS	Centers for Medicare & Medicaid Services (US federal agency that operates the Medicare program
	and works in partnership with state governments to operate the Medicaid program)
CMT	Charcot-Marie-Tooth disease
CNS	Central nervous system
COPD	Chronic obstructive pulmonary disease
CPI	Checkpoint inhibitor
CR	Complete response
CR	Complete remission
CRC	Colorectal cancer
CRE	Carbapenem-resistant Enterobacteriaceae
CRL	Complete response letter (reflects FDA's complete review of a new or generic drug application that
200	has not been approved for marketing)
CRO	Contract research organisation
CsA	Cyclosporin A
CSF	Cerebrospinal fluid
CTA	Clinical trials application (EU version of an IND)
CTN	Clinical Trials Notification Scheme (Australian version of an IND)  Cardiovascular
	C-X-C chemokine receptor type 4
DC CXCR4	Dendritic cell
DCR	Disease control rate
DEA	Drug Enforcement Administration (US agency focused on controlled substances)
DFS	Disease-free survival
DGF	Delayed graft function
DIPG	Diffuse intrinsic pontine glioma
DLBCL	Diffuse large B-cell lymphoma
DLT	Dose-limiting toxicity
DMF	Drug master file (submission to FDA to provide confidential, detailed information about facilities or
DIVII	processes used in the manufacturing, processing, packaging, and storing of human drug products)
DMPK	Drug metabolism and pharmacokinetics
DMT	Disease modifying therapy
DoR	Duration of response
DRG	Diagnosis-related group code
Dry-AMD	Dry age-related macular degeneration
DSMB	Data safety monitoring board
DT	Destination therapy
DTC	Direct to consumer
EB	Epidermolysis bullosa
EBT	External-beam radiation therapy
ECM	Extracellular matrix
EDL	Essential drug list (list of medicines that must be in stock at public hospitals and clinics in China)
EGFR	Epidermal growth factor receptor
EMA	European Medicines Agency (European regulator)
epNET	Non-pancreatic neuroendocrine tumour
ER	Estrogen receptor
ESMO	European Society for Medical Oncology
EUA	Emergency Use Authorization
FDA	Food and Drug Agency (US regulator)
FGFR	Fibroblast growth factor receptors
FISH	Fluorescence in situ hybridization

FL	Follicular lymphoma
FTD	Fast Track Designation (facilitates development and expediates FDA review of drugs to treat seriou
	conditions and fill an unmet medical need)
GA	General anaesthesia
GA	Geographic atrophy
GA-AMD	Geographic atrophy associated with dry age-related macular degeneration
GBM	Glioblastoma
GC	Gastric cancer
G-CSF	Granulocyte colony-stimulating factor
GDI	Glaucoma drainage implant
GDUFA	Generic Drug User Fee Act date (when FDA is expected to approve/not approve ANDA)
GI	Gastrointestinal
GIST	Gastrointestinal stromal tumours
GMP	Good manufacturing practice
GPR	G-protein-coupled receptor
GvHD	Graft vs host disease
H2H	Head to head
HAIs	Hospital-acquired infections
HbV	Haemoglobin
HBV	Hepatitis B virus
HCC	Hepatocellular cancer
HDAC	Histone deacetylase
HDL	How-density lipoprotein (cholesterol)
HER	Human epidermal growth factor receptor
HF.	Heart failure
HHT	Human heart transplantation
HHV	Human herpesvirus
HLA	Human leukocyte antigen
HMAs	Hypomethylating agents
HNSCC	Head and neck squamous cell carcinoma
npSCs	Human parthenogenetic stem cells
HPV	Human papilloma virus
HR HB MBC	Hazard ratio
HR-MDS	Higher-risk myelodysplastic syndrome
hRPC	Human retinal progenitor cell
HRQoL	Health-related quality-of-life
HSCT	Hematopoietic stem cell transplant
HSIL	High-grade squamous intraepithelial lesion
IBD	Inflammatory bowel disease
IBS-D	Irritable bowel syndrome with diarrhoea
ICCA	Intrahepatic cholangiocarcinoma
ICER	Institute for Clinical and Economical Review
ICU	Intensive care unit
ID.	Iron deficiency
IDA	Iron deficiency anaemia
IDMC	Independent Data Monitoring Committee
IDN	Integrated delivery network
HC	Immunohistochemistry
IT	Investigator-initiated trials
LD	Interstitial lung disease
MP	Investigational medicinal product (Australia TGA terminology)
IND	Investigational New Drug Application (submission to FDA required to start clinical trials)
0	Immuno-oncology
OP DE	Intraocular pressure
PF D	Idiopathic pulmonary fibrosis
R	Insulin receptor
TP	Immune thrombocytopenia
TT v im ss	Intention-to-treat (analysis includes all patients randomised in the clinical study)
v, im, sc	Intravenous, intramuscular, subcutaneous
KOL LAI	Key opinion leader
_AI _CD	Long-acting injectable
LOD	Local coverage determination (MAC decision whether to cover a particular treatment in its jurisdiction)
LDAC	Jurisdiction)  Low-dose cytarabine
LDAC LDL	Low-dose cytarabine Low-density lipoprotein (cholesterol)
LDTs	
LDIS LHON	laboratory-developed tests
	Leber's hereditary optic neuropathy
LMWH LPAD	Low molecular weight heparin  Limited population pathway for antibacterial and antifungal drugs (FDA pathway to approval for
LFAU	antibacterial and antifungal drugs that treat serious infections in a small population of patients with
	unmet needs)

LSC	Leukaemia stem cells
LSIL	Low-grade squamous intraepithelial lesions
LT	Laser trabeculoplasty
LVEF	Left ventricular ejection fraction
LVESV	Left ventricle end systolic volume
LVV	Lentiviral vector
MAA	Marketing Authorisation Application (EMA regulatory filing for approval)
MAC	Medicare Administrative Contractor (private insurer that has been awarded geographic jurisdiction to
	process claims)
MAC	Mycobacterium avium complex
MACE	Major adverse cardiac event
MAD	Multiple ascending dose
mBC	Metastatic breast cancer
MC	Mast cell
mCDRPC	Metastatic castration and docetaxel resistant prostate cancer
MCI	Minimal cognitive impairment
MCL	Mantle cell lymphoma
mCRC	Metastatic colorectal cancer
mCRPC	Metastatic castration-resistant prostate cancer
MCS	Mechanical circulatory support
MDS	Myelodysplastic syndrome
MDSC	Myeloid-derived suppressor cell
MES	Molecular epidemiology study
MET	Mesenchymal epithelial transition factor
MFS	Metastasis-free survival
MHRA	Medicines and Healthcare Products Regulatory Agency (UK regulator) Myocardial infarctions
MIGS	Minimally invasive glaucoma surgeries
MM	Multiple myeloma
MMP-2	Matrix metalloproteinase-2
MoA	Mode of action
mOS	Median overall survival
MPC	Mesenchymal precursor cell
mPFS	Median progression-free survival
MRI	Magnetic resonance imaging
MRP	Mutual recognition procedure (one route of filing in the EU)
MRSA	Methicillin-resistant Staphylococcus aureus
MS	Multiple sclerosis
MSA	Medical savings account (allows owner to withdraw earmarked funds to pay for treatments)
MSC	Mesenchymal stem cell
MT	Monotherapy
MTD	Maximum tolerated dose
MTR	Molecularly targeted radiation
NAFLD	Nonalcoholic fatty liver disease
nAMD	Neovascular age-related macular degeneration
NASH	NASH activity score
NASH	Non-alcoholic steatohepatitis
NCI	National Cancer Institute (US agency for cancer research)
NDA	New Drug Application (FDA filing application for approval for chemical/small molecule drugs)
NET	Neuroendocrine tumour
NGF	Nerve growth factor
NGS	Next generation sequencing
NHL	Non-Hodgkin's lymphoma
NHP	Non-human primate
NHSA	National Healthcare Security Administration (agency in China that manages medical insurance
NIAID	schemes)  National Institute of Allergy and Infectious Diseases (US agency for the research of infectious,
NIAID	immunologic and allergic diseases)
NICE	National Institute for Health and Clinical Excellence (develops clinical guidelines for NHS)
NK	Natural killer cell
NME	New molecule entity (FDA regulatory pathway)
NMIBC	Non-muscle invasive bladder cancer
NMPA	Chinese National Medical Products Administration (China regulator)
NO	Nitric oxide
NRDL	National reimbursement drug list (includes drugs reimbursable by public insurance schemes in
MADL	China)
NSCLC	Non-small cell lung cancer
NTAP	New technology add-on payments (CMS provides additional payment to hospitals for new, high-cost
e e · e e	medical services and technologies)
	medical services and technologies)
NTM	Pulmonary non-tuberculous mycobacteria
NTM OAG OC

RBC Red blood cell	QoL	
	RBC	Red blood cell

RCC	Renal cell carcinoma
RCT	Randomised clinical trial
RECIST	Response evaluation criteria in solid tumours
RFS	Relapse free survival
RGC	Retinal ganglion cell
RI	Rapid infusion
RMAT	Regenerative medicine advanced therapy (FDA designation for regenerative medicine therapies that enables eligibility for expediated programs)
RP	Retinitis pigmentosa
RP2D	Recommended Phase II dose
RTD	Ready to dilute formulation
RTF	Refusal to file (allows FDA to inform sponsors of deficiencies in their NDA or BLA as soon as possible, instead of waiting to issue a CRL)
RTK	Receptor tyrosine kinase
RT-PCR	Reverse transcriptase polymerase chain reaction
SAA	Prescription  Source expects a promise
SAB	Severe aplastic anaemia Staphylococcus aureus bacteraemia
SAD	Single ascending dose
SAE	Serious adverse event
SAP	Statistical analysis plan
SARS	Severe acute respiratory syndrome
SCCHN	Squamous cell carcinoma of the head and neck
SCLC	Small cell lung cancer
SD	Stable disease
SMA	Spinal muscular atrophy
SMC	Safety monitoring committee
SNS	Strategic National Stockpile
SoC	Standard of care
SPA	Special protocol assessment (FDA process to reach agreement with sponsors on the design and size
	of certain clinical trials)
SPECT	Single photon emission computed tomography
SPION	Super paramagnetic iron oxide nanoparticle
SRE	Skeletal-related event
T1D	Type 1 diabetes
T2D	Type 2 diabetes
TAAs	Tumour-associated antigens
TAH	Total artificial heart
TAM	Tumour-associated macrophage
TBI	Traumatic brain injury
TCM	Traditional Chinese medicine
TCR TD	T-cell receptor Travellers' diarrhoea
TEAE	Treatment-emergent adverse event
TfR	Transferrin receptor
TGA	Therapeutic Goods Administration (Australia regulator)
TGF	Transforming growth factor
Th cell	T helper cell
THC	Tetrahydrocannabinol
TKI	Tyrosine kinase inhibitor
TLR	Toll-like receptor
TM	Trabecular meshwork
TMAC	Tissue microenvironment-activated conjugates
TME	Tumour microenvironment
TNBC	Triple-negative breast cancer
TNK	Tumour necrosis factor
TPS	Tumour proportion score
TSAs	Tumour-specific antigens
TTFields	Tumour-treating fields
TTP	Time-to-progression
TURBT	Transurethral resection of the bladder tumour
Тх	Treatment
UBC	Umbilical cord blood
UC	Urothelial cancer
URD	Unrelated matched donor
VADs	Visual acuity
VADs	Ventricular assistance devices (L = left, R = right and Bi=biventricular)
VEGFR	Vascular endothelial growth factor receptors
VHC	Viral haemorrhagic cystitis
VMIC	Vaccines Manufacturing and Innovation Centre
WHO WT	World Health Organisation
VV I	Wild type

## General disclaimer and copyright

This report has been prepared and issued by Edison. Edison Investment Research standard fees are £60,000 pa for the production and broad dissemination of a detailed note (Outlook) following by regular (typically quarterly) update notes. Fees are paid upfront in cash without recourse. Edison may seek additional fees for the provision of roadshows and related IR services for the client but does not get remunerated for any investment banking services. We never take payment in stock, options or warrants for any of our services.

Accuracy of content: All information used in the publication of this report has been compiled from publicly available sources that are believed to be reliable, however we do not guarantee the accuracy or completeness of this report and have not sought for this information to be independently verified. Opinions contained in this report represent those of the research department of Edison at the time of publication. Forward-looking information or statements in this report contain information that is based on assumptions, forecasts of future results, estimates of amounts not yet determinable, and therefore involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of their subject matter to be materially different from current expectations.

**Exclusion of Liability:** To the fullest extent allowed by law, Edison shall not be liable for any direct, indirect or consequential losses, loss of profits, damages, costs or expenses incurred or suffered by you arising out or in connection with the access to, use of or reliance on any information contained on this note.

**No personalised advice:** The information that we provide should not be construed in any manner whatsoever as, personalised advice. Also, the information provided by us should not be construed by any subscriber or prospective subscriber as Edison's solicitation to effect, or attempt to effect, any transaction in a security. The securities described in the report may not be eligible for sale in all jurisdictions or to certain categories of investors.

**Investment in securities mentioned:** Edison has a restrictive policy relating to personal dealing and conflicts of interest. Edison Group does not conduct any investment business and, accordingly, does not itself hold any positions in the securities mentioned in this report. However, the respective directors, officers, employees and contractors of Edison may have a position in any or related securities mentioned in this report, subject to Edison's policies on personal dealing and conflicts of interest.

### **Australia**

Edison Investment Research Pty Ltd (Edison AU) is the Australian subsidiary of Edison. Edison AU is a Corporate Authorised Representative (1252501) of Crown Wealth Group Pty Ltd who holds an Australian Financial Services Licence (Number: 494274). This research is issued in Australia by Edison AU and any access to it, is intended only for "wholesale clients" within the meaning of the Corporations Act 2001 of Australia. Any advice given by Edison AU is general advice only and does not take into account your personal circumstances, needs or objectives. You should, before acting on this advice, consider the appropriateness of the advice, having regard to your objectives, financial situation and needs. If our advice relates to the acquisition, or possible acquisition, of a particular financial product you should read any relevant Product Disclosure Statement or like instrument.

### **New Zealand**

The research in this document is intended for New Zealand resident professional financial advisers or brokers (for use in their roles as financial advisers or brokers) and habitual investors who are "wholesale clients" for the purpose of the Financial Advisers Act 2008 (FAA) (as described in sections 5(c) (1)(a), (b) and (c) of the FAA). This is not a solicitation or inducement to buy, sell, subscribe, or underwrite any securities mentioned or in the topic of this document. For the purpose of the FAA, the content of this report is of a general nature, is intended as a source of general information only and is not intended to constitute a recommendation or opinion in relation to acquiring or disposing (including refraining from acquiring or disposing) of securities. The distribution of this document is not a "personalised service" and, to the extent that it contains any financial advice, is intended only as a "class service" provided by Edison within the meaning of the FAA (i.e. without taking into account the particular financial situation or goals of any person). As such, it should not be relied upon in making an investment decision.

### **United Kingdom**

This document is prepared and provided by Edison for information purposes only and should not be construed as an offer or solicitation for investment in any securities mentioned or in the topic of this document. A marketing communication under FCA Rules, this document has not been prepared in accordance with the legal requirements designed to promote the independence of investment research and is not subject to any prohibition on dealing ahead of the dissemination of investment research.

This Communication is being distributed in the United Kingdom and is directed only at (i) persons having professional experience in matters relating to investments, i.e. investment professionals within the meaning of Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005, as amended (the "FPO") (ii) high net-worth companies, unincorporated associations or other bodies within the meaning of Article 49 of the FPO and (iii) persons to whom it is otherwise lawful to distribute it. The investment or investment activity to which this document relates is available only to such persons. It is not intended that this document be distributed or passed on, directly or indirectly, to any other class of persons and in any event and under no circumstances should persons of any other description rely on or act upon the contents of this document.

This Communication is being supplied to you solely for your information and may not be reproduced by, further distributed to or published in whole or in part by, any other person.

### **United States**

Edison relies upon the "publishers' exclusion" from the definition of investment adviser under Section 202(a)(11) of the Investment Advisers Act of 1940 and corresponding state securities laws. This report is a bona fide publication of general and regular circulation offering impersonal investment-related advice, not tailored to a specific investment portfolio or the needs of current and/or prospective subscribers. As such, Edison does not offer or provide personal advice and the research provided is for informational purposes only. No mention of a particular security in this report constitutes a recommendation to buy, sell or hold that or any security, or that any particular security, portfolio of securities, transaction or investment strategy is suitable for any specific person.
